 AB - KR2002021745 NOVELTY - A method for setting a shortcut key of a mobile
       communication terminal is provided to conveniently select a menu by
       setting the menu as the shortcut key.
      - DETAILED DESCRIPTION - A control unit displays an upper menu
       list(101). The control unit confirms whether a key is inputted(103).
       If the key is inputted, the control unit judges whether the inputted
       key is a key for selecting a menu(105). If the inputted key is the key
       for selecting the menu, the control unit displays a lower menu of the
       selected menu(107). If the inputted key is not the key for selecting
       the menu, the control unit confirms whether the inputted key is a
       shortcut setting key(109). If the inputted key is the shortcut setting
       key, the control unit confirms whether a random numerical key is
       inputted(111). If the random numerical key is inputted, the control
       unit set the inputted numerical key as the shortcut key(113).
